Harris Corporation Introduces the RF-7800S
Secure Personal Radio

CAPE TOWN, September 19, 2006 (Africa Aerospace, hall #8, booth B5) — Harris Corporation (NYSE:HRS) today introduced the RF-7800S, its new Secure Personal Radio (SPR) for the worldwide market. The radio system provides secure, digitized voice and data communications to the individual soldier, and fits seamlessly into a variety of network-centric systems, including those based on the highly successful Harris Falcon[®] II family of tactical radios. The system features selectable high-grade encryption, and its 350-450 MHz frequency band provides worldwide use and excellent range in both urban and rural environments.

“The SPR’s small, lightweight design fits easily in a pocket, and offers completely automatic and hands-free operation,” said Steve Marschilok, vice president and general manager of Harris International Products and Systems. “It offers both traditional narrowband communication, as well as a sophisticated wideband waveform that provide secure, full-duplex voice conferencing, situational awareness, and high-speed data. The flexibility of the new SPR helps to bring greater command and control capability to the squad level and to the individual soldier.”

The radio is designed for highly integrated C⁴I capability, incorporating a Global Positioning System receiver and standard USB interfacing, allowing easy-to-use position tracking and messaging services while reducing the load carried by the soldier.

All transmissions are secured by standard AES or customer-unique Citadel[®] digital encryption that protect tactically relevant command and situational information from eavesdroppers. The SPR’s unique wireless network does not require infrastructure and provides reliable communication even where backbone and trunk services are not available.

Harris is an international communications and information technology company serving government and commercial markets in more than 150 countries. With headquarters in Melbourne, Florida, the company has annual sales of \$3.5 billion and nearly 14,000 employees — including more than 6,000 engineers and scientists — dedicated to the development of best-in-class, *assured communications*[™] products, systems, software, and services. The company’s operating divisions serve markets for government communications, RF communications, broadcast communications, and microwave communications.
